Build & Deploy
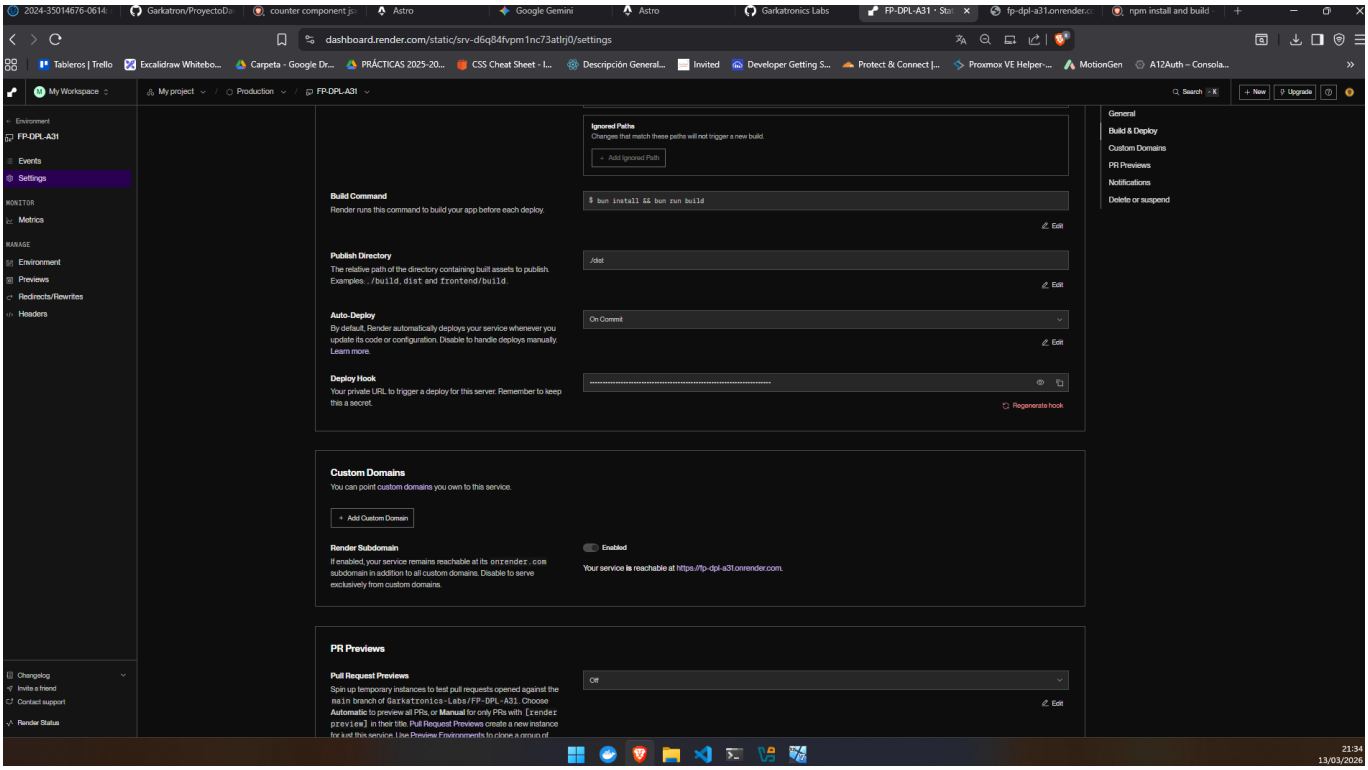
Repository
The repository used for your Static Site.
https://github.com/Garkatronics-Labs/FP-DPL-A31
Branch
The Git branch to build and deploy.
main
Git Credentials
User providing the credentials to pull the repository.
masitacarg@gmail.com (you)
Use My Credentials
Root Directory Optional
If set, Render runs commands from this directory instead of the repository root. Additionally, code changes outside of this directory do not trigger an auto-deploy. Most commonly used with a monorepo.
Build Filters
Include or ignore specific paths in your repo when determining whether to trigger an auto-deploy. Paths are relative to your repo's root directory. Learn more.
Included Paths
Changes that match these paths will trigger a new build.



dashboard.render.com/static/srv-d6q84fvpm1nc73atlrj0/settings
Ignored Paths
Changes that match these paths will not trigger a new build.
Add Ignored Path
Build Command
Render runs this command to build your app before each deploy.
$ bun install && bun run build
Edit
Publish Directory
The relative path of the directory containing built assets to publish. Examples: ./build, dist and frontend/build.
./dist
Edit
Auto-Deploy
By default, Render automatically deploys your service whenever you update its code or configuration. Disable to handle deploys manually. Learn more.
On Commit
Edit
Deploy Hook
Your private URL to trigger a deploy for this server. Remember to keep this a secret.
Regenerate hook
Custom Domains
You can point custom domains you own to this service.
Add Custom Domain
Render Subdomain
If enabled, your service remains reachable at its onrender.com subdomain in addition to all custom domains. Disable to serve exclusively from custom domains.
Enabled
Your service is reachable at https://fp-dpl-a31.onrender.com.
